1. Tumor Removal
Tumor removal keeps its top spot. This procedure eliminates abnormal growths or masses which may be cancerous, including skin cancer, or benign. A skilled plastic surgeon extracts the tumor while leaving surrounding healthy tissue intact. Tumor removal addresses not just the immediate health concerns of the patient but also leads to better long-term outcomes and improved quality of life.

2. Hand Surgery
Hand surgery moved up three spots to second place on the Top 5 list. This procedure is a specialized field of plastic surgery that treats and rehabilitates conditions affecting the hand, wrist and forearm, such as arthritis, carpal tunnel syndrome and trigger finger.

3. Breast Reconstruction
Breast reconstruction appears for the first time in the Top 5. This procedure restores form to the breasts post-mastectomy and has been shown to improve self-esteem and aid in positive body image after undergoing breast cancer diagnosis, treatments or other medical conditions.

4. Maxillofacial
Maxillofacial remains fourth on the Top 5 list. This reconstructive surgery restores both form and function to one of the body’s most visible features – the face and jaw. It helps restore or improve essential functions such as speaking, chewing, swallowing and breathing.

5. Scar Revision
Scar revision drops two spots on the Top 5. Scars can affect a person physically, functionally and psychologically. Plastic surgeons can minimize the visibility of scars and improve their texture, giving a more natural appearance to the skin. Scar revision can also improve mobility and relieve discomfort.
